

The QBIX logo is positioned in the upper left quadrant of the image. It features the letters 'QBIX' in a bold, sans-serif font. The 'Q' and 'B' are dark blue, while the 'I' and 'X' are a lighter, vibrant blue. The 'X' is formed by two intersecting diagonal lines.

QBIX

The U.S. ARCHITECTURAL LIGHTING logo is located in the bottom left corner. It consists of a square icon on the left containing a white star and a stylized 'A' shape. To the right of the icon, the words 'U.S. ARCHITECTURAL' and 'LIGHTING' are stacked vertically in a clean, white, sans-serif font.

ARCHITECTURAL SCENCE

Innovative Design Superior Performance

LIGHTING TAILORED TO COMPLEMENT

QBIX Compact

QBIX Medium

Introducing the QBIX Architectural Scence Series, a groundbreaking line of dual-purpose wall-mounted exterior lighting fixtures designed to elevate both the functionality and aesthetic of any façade. Available in two distinct sizes: an elegant square compact version, the QBIX Compact (QBX-C), and a versatile rectangular option, the QBIX Medium (QBX-M). The QBIX Series seamlessly blends innovative functionality with minimalistic aesthetics to complement any outdoor structure.

The QBIX Series creates beautiful and intentional light emanating from a refined, minimalistic design. Illuminated beams create poetry with the play of light upon the surface and its surroundings. The QBIX's line of configurable optical options tailor the light's aesthetic and performance to fit a variety of applications. Whether you're illuminating an office building, hotel, shopping center, entertainment complex, or educational campus, the QBIX fixtures offer the perfect blend of style and practicality. Embrace the versatility and elegance of the QBIX Series, where innovative design meets superior performance in outdoor lighting solutions.

ILLUMINATE YOUR SPACE WITH PRECISION

The QBIX family is engineered to provide a unique combination of downward area lighting and upward or downward accent lighting, creating a dynamic interplay of light that enhances both setting and visibility. The downward area lighting effectively illuminates pathways, entrances, and patios, ensuring safety and visibility after dark.

In contrast, the Accent Lighting selection, which offers 3 versatile illumination options: Narrow-Spot, Medium and Wide, beautifully highlights and accentuates architectural features, adding depth and character to your exterior walls, transforming ordinary spaces into extraordinary experiences. This adaptability allows users to customize the ambiance with precision, enhancing the overall aesthetic of any outdoor space.

Narrow-Spot (~14°)

Very narrow which can help to highlight narrow architectural elements like columns or recesses, or just provide a dramatic pencil-beam effect.

Medium (16° x 47°)

Helps to highlight and wash a wider area of walls, with a very narrow beam in the direction off of the wall which helps to enhance the texture of the wall and create a dramatic effect of light and shadows.

Wide (17° x 75°)

Similar to the Medium in creating drama, but evenly illuminates a much wider area of wall to create a seamless and uniform area of light across multiple fixtures.

Built to Last Designed to Shine

The QBIX Architectural Sconce is a robust lighting solution designed for durability and resilience in various outdoor conditions. Constructed from high-quality, weather-resistant materials, this fixture is built to withstand the harsh elements that outdoor lighting can face, including moisture, UV exposure, and temperature fluctuations. The QBIX is crafted from highly durable and corrosion resistant A365 aluminum alloy with a low copper content of less than 0.2%, ensuring that the fixture maintains its structural integrity over time, minimizing the risk of corrosion.

ALED™ Accent Module

Custom designed lighting module tuned for façade illumination. Integral Heat sink and Metal Clad PCB to maximize lifetime, ensuring lumen maintenance (L70) exceeds 50,000 hours. Impact, shatter, and UV resistant Acrylic Lens with enhanced optical clarity and minimal light loss. Mechanically sealed with a heat-resistant Silicon Gasket to exceed IP65 standards.

Housing

Heavy wall, low copper cast aluminum alloy (A356 alloy, <0.2% copper) manufactured for high durability and corrosion resistance. All hardware is stainless steel. Super TGIC polyester powder coating applied onto Housing Surface pretreated with a four-stage process for maximum adhesion and color retention.

Installation Support Bracket

High durability 6061-T6 mounting bracket and independently mounts to the wall bracket or junction box for ease of installation. QBIX mounts over the Installation Support Bracket and secured tightly with a retention set screw.

PLED™ Downlight Module

US Architectural's proprietary site and area PLED™ optic system - includes high intensity capable LEDs and custom designed IP66-sealed PMMA acrylic refractive optics tuned for 18 unique site and area beam distributions.

Ambience Low Luminance Lens

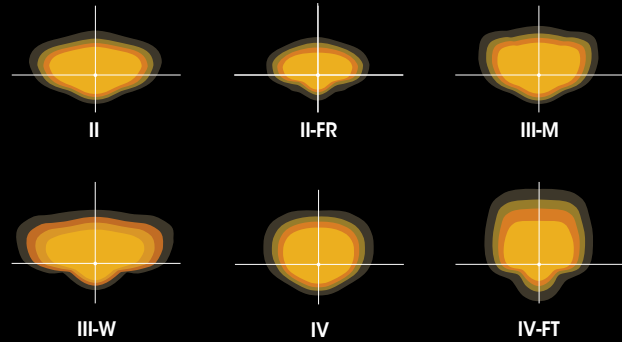

Optional Ambience Lens (AL) enables low luminance reduced glare distributions. Custom designed lens diffuses the PLED™ Optics and provides a more uniform luminance across the aperture reducing glare at all angles.

Custom Brightness Compact Design

PLED™ Optical Module - Area Down Light

U.S. Architectural Lighting's PLED™ Optical Module, a leading Lighting System for Site and Area Lighting, delivers the highest performance in the industry. Available in 6 unique distributions, with optional Ambience lens for Low Glare and pedestrian scale heights.

Optional house side shields are available to cover each optic. Panels are field replaceable and field rotatable in 90° increments. All PLED™ fixture optical options provide a "U0" no uplight optical package and are dark sky friendly.

Ambience™ Lens

ALED™ Optical Module - Accent Light

ALED™ is the newest performance lighting module from U.S. Architectural Lighting. It incorporates specifically sourced LEDs, has unique collimating optics for tight beam and asymmetric and utilizes holographic diffusers to further tune and shape the light beam.

This innovative, and field aimable optical system delivers the lighting beam and the footcandles where you want it to highlight, enhance, and provide drama for your building and its architectural elements.

Optical Configurations

With its modular design that enables PLED™ and ALED™ modules to be interchangeable, the QBIX is a miniature but mighty fixture that delivers maximum performance for its size.

Field Adjustable

Patented field accessible hex socket Aiming Port on the Housing enables +/- 10-degree rotation of the ALED™ Accent Light Module, allowing the beam to easily be adjusted on-site.

- Ensure the vision of the architect and lighting designer are achieved
- Correct imperfections in the straightness of the wall
- Aim beam intensity location or shadowing to enhance drama and ensure fixture-to-fixture uniformity
- Minimize stray light pollution

Small in Size Big on Function

QBIX, the only Architectural Sconce to provide exceptional Site and Area Lighting with Specification Grade Architectural façade lighting, is a flexible Dual Purpose Architectural Sconce Luminaire. While Others compromise, particularly when it comes to Architectural/Flood lighting, the QBIX offers light output and optic quality at the highest level for both Site and Area and Architectural Flood/Accent. As the only Architectural Accent/Flood module able to be aimed like a real Architectural lighting fixture, with the QBIX both options are available together or separately. The choice is yours to make.

QBIX Compact
(QBX-C)

QBIX Medium
(QBX-M)

The QBIX proves that great things come in small packages. Its compact size conceals its impressive functionality, and does it all with style and efficiency, delivering powerful, wide-reaching light output and versatile features that rival much larger fixtures. Small in size but big on function, the QBIX is the perfect solution for those seeking performance without compromise.
